

Our Lady of Victory School

**GENERAL MATH COURSE**

Introduction

The books used for the General Math Course are Consumer Math and Bookkeeping Made Simple (Revised 2005) by David A. Flannery. The answer key is in the back of *Consumer Math* and after each lesson in *Bookkeeping Made Simple*. For the first five weeks the student will have a general review of basic arithmetic. As the course develops, we will introduce math which is used in our every day life. This will help the student prepare for his/her personal financial management. The student should not fear Mathematics and, in fact, this course will be very rewarding if the student uses a little time and effort.

A “master” Work Sheet (to make necessary copies from) can be found on the next page. The Work Sheets are to be used for the **weekly** work that needs to be sent in. Also, work/test sheets will accompany the Quarter Tests for solving problems. **One matter that must be stressed is that all work must be shown, as it will be part of the grading system.** This will show the tutor that the student has mastered the problem and has a working knowledge of the material. Please be neat in your work, as this course will help in preparing you for the world of business and adulthood. Now, one does not go to a financial planner when that person prepares their report in a messy fashion; and so, neither shall you prepare work for this course that is done in an unprofessional manner.

Take your time and master the lessons taught before going on to the next lesson. If there are any questions which need to be answered, please feel free to contact us here at the school. Best wishes and enjoy learning this course. May God bless you.
